

Extra Credit

1. I haven't asked many questions but when people did ask questions, I paid attention to what they were asking, and the answer give as the response. Through this my understanding of op amps became much clearer.
2. I was struggling with setting up the MyDAQ and watching the MyDAQ help video helped with my understanding of the MyDAQ. Specifically, how the MyDAQ can be used as a power supply to the breadboard.
3. Organic Chemistry Tutor has good videos on op amps. They are introductory videos, but they are good for the basics.
4. Overall, I enjoy the class and I really don't have any feedback on how it could be better.
