

**Extra Bonus Opportunity**  
**Ashleigh Moffett**  
**Feb/28/2022**

In this extra bonus opportunity, please start to draft the **reflections for your learning experiences** you have had for the

- (1) In class learning such as answering questions, how many you have answered? What you have learnt from those?
  - a. In class I do not typically answer many questions. Many students work faster than I do or have prior knowledge of the content discussed, however, when I am presented with the opportunity to answer questions I sprung on it. I enjoy answering questions when I am quick enough, and I retain the information better once I have answered them because there is always the fear of being wrong and when I am right it makes me feel accomplished.
- (2) Learn from the posted videos, what you learned from those videos?
  - a. The posted videos help me catch up on a subject I am unsure about. They allow me to backtrack and walk myself through the portions of the lecture I feel like I didn't comprehend as well. The videos are a good platform for me to rebuild a foundation in a certain portion of the class where I didn't understand the content and they explain and elaborate on it more. As well as they walk me through the amplifier process, help with homework, and other subjects.
- (3) Any extra learning resources you have found helpful for you, such as from a Youtube Video, a Blog? Let me know those.

- a. Introduction to Operational Amplifier: Characteristics of Ideal Op-Amp @[ALL ABOUT ELECTRONICS](#)
- b. On YouTube all their videos help with the material we are learning

*(4) Provide me some feedback for how to make our class better, any feedback will be highly appreciated to make sure you are successful for our class.*

- a. Going over some more example problems might help, and primarily help on the homework due in class helps a lot. When we work through the problems it helps me retain the process and gain a better understanding of the material.
