

Extra Bonus Opportunity
Ashleigh Moffett
April/7/2023

- (1) In class learning such as answering questions, how many you have answered? What you have learnt from those?
- a. I haven't answered many but I feel many of the students in our class are extremely vocal and will pose questions I share. I have probably answered 1 or 2 but at the same time I am not usually confused by math I follow it and then review the process when I get home so I can understand it better. Normally I don't learn instantly I learn from reviewing and reworking the problems and concepts.
- (2) Learn from the posted videos, what you have learnt from those videos?
- a. I have learned from the videos it helps touch up on class concepts and they are easier to watch and take notes on as filler information.
- (3) Any extra learning resources you have found helpful for you, such as from a Youtube Video, a Blog? Let me know those.
- a. No I haven't been watching much on YouTube I mainly review homework and our PowerPoint/in class notes.
- (4) *I know its close to the end of the semester. However, provide some feedback for what you have desired to learn but not able to learn yet.*
- a. I have desired to learn but have not been able to learn yet more about BJT circuits at DC I know we have touched on it but I would enjoy going more in depth.
